

Innovative by nature

## Asset and Vegetation Management Services to the Rail Industry

The company was established in 1992 by the current owner / managing director and incorporated as Avondale Environmental Services Ltd in 1994.

Our skilled, competent and experienced workforce together with specialist plant and equipment offers flexible, cost effective and highly productive solutions able to meet

changing priorities and budgets without compromising high safety and quality standards.

In 2002 we moved to our current premises at Fort Horsted in Chatham Kent, where we continue to expand our range of services and the resources required to deliver them.

Our PTS employees hold a range of rail safety critical competences together with NPTC qualifications including chainsaw, felling, climbing and tree surgery and manual and mechanised spraying.

Today our core business remains the provision of asset and vegetation management to a wide range of clients in key market sectors with most importantly over 20 years experience working on the rail

infrastructure.

Lineside assets such as retaining walls, also benefit from the services we offer including invasive species treatment, washing, cleaning and graffiti removal.

Innovative by nature, we continually develop solutions based on the Mercedes Benz Unimog platform.

With our head office and depot in the South East we are ideally placed to operate locally and nationally.
